

Week 01

Day 02 - select a vehicle for our weight and maximum speed

Day 03 - find all parameters for that vehicle.

Day 05 - select a wheel (Tyre)

Day 06 - Calculate the maximum power of the engine

Day 07 - select a suitable engine

4/1/24

No. _____ Date: _____
2nd week (2024/09/04 - 2024/09/11)

Day 01

All design parameters were reached and errors were corrected.

Day 03

The most suitable tire was selected considering all the practical conditions. It was also included in the report.

Day 04

Considering all the practical conditions, the maximum power required for our vehicle in the inclined plane and in the horizontal plane was calculated.

Day 05

An automotive engine that provides the required power and has sufficient information was selected.

Day 06

Identify an optimum range in which the engine should work.

Day 07

All gear ratios and wheel speeds were calculated within the selected engine rpm range.

11/9/24 ~~11~~

No. _____ Date: _____
3rd week (2024/09/11 - 2024/09/18)

Day 1

The final report prepared. check all errors and then it submit to the moodle.

Before submit we collect all document which have prepared by own us.

Day 3

we studied some tutorials on solid edge.

Day 5

We studied more detailed about solid edge.

Day 7

We discussed about our report with group buddies.

4th week 2024/10/02 - 2024/10/09

Day 01

we discussed and took a final decision how to prepare material selection report.

Day 03/04/05

According to our discussion I prepare ~~as~~ my own report and others also do that.

Day 06

Considering these three reports, we were take final decision what are the thing should add or not to our final report and started to prepare final report.

Day 07

Finished our final report and make refining and then printed. ~~to~~

09/10/2024

Abdullah

No. _____ Date: ____/____/____
5th week 2024/10/09 - 2024/10/16

Day 01

* Discussed on calculation part with group members

Day 02

* Calculate on gears

* Checking safety conditions and select suitable material

Day 03

Finalizing gear teeth and sizes.

Day 04

calculations on shafts

Day 05

checking safety conditions and select suitable materials for shaft

Day 06

calculations on keys ~~fix~~ and finalizing

Day 07

Calculations on bearings and finalizing

~~21/10~~

No: _____ Date: _____
6th week 2024/10/16 - 2024/10/23

Day 01

selecting suitable lubricant type
observing how input and output parameters has varied

Day 02

calculation report preparation

Day 03

finalizing the calculation report

Day 04

Studying on ~~gears~~ drawing gears

Day 05

Starting drawing gears

Day 06

Drawin gears

23/10

No. _____ Date _____
Week 01 (2024/10/23 - 2024/10/30)

Day 01 - start drawing shafts and splines
- Designing keys

Day 02 - continuing of shafts designing
start drawing bearings and dog clutch.

Day 03 - Finishing designing of shafts
Finishing designing of bearing and dog clutch
starting assembly drawing
Start final report preparation (observing
how selected materials through literature are
changing with calculations,

Day 04 - Finishing assembly drawings
